Can T Find Usable Init Tcl Tcllibrary

Tcl 8.x List Conversion Functions

`Tcl_Obj *Tcl_NewListObj(int objc, Tcl_Obj *objv)`	Creates a new Tcl List object. `objc` contains the element count and `objv` is an array of Tcl objects.
`int Tcl_ListObjAppendList(Tcl_Interp *, Tcl_Obj *listPtr, Tcl_Obj *elemListPtr)`	Appends the objects in `elemListPtr` to the list object `listPtr`. Returns TCL_ERROR if an error occurred.
`int Tcl_ListObjAppendElement(Tcl_Interp *, Tcl_Obj *listPtr, Tcl_Obj *element)`	Appends element to the end of the list object `listPtr`. Returns TCL_ERROR if an error occurred. Will convert the object pointed to by listPtr to a list if it isn't one already.
`int Tcl_ListObjGetElements(Tcl_Interp *, Tcl_Obj *listPtr, int *objcPtr, Tcl_Obj ***objvPtr)`	Converst a Tcl List object into an array of pointers to individual elements. `objcPtr` receives the list length and `objvPtr` receives a pointer to an array of Tcl_Obj pointers. Returns TCL_ERROR if the list can not be converted.
`int Tcl_ListObjLength(Tcl_Interp *, Tcl_Obj *listPtr, int *intPtr)`	Returns the length of a list in `intPtr`.If the object is not a list or an error occurs, the function returns TCL_ERROR.
`int Tcl_ListObjIndex(Tcl_Interp *, Tcl_Obj *listPtr, int index, Tcl_Obj **objptr)`	Returns the pointer to object with given index in the list. Returns TCL_ERROR if `listPtr` is not a list or the index is out of range. The pointer is returned in `objptr`.
`int Tcl_ListObjReplace(Tcl_Interp *, Tcl_Obj *listPtr, int first, int count, int objc, Tcl_Obj *objv)`	Replaces objects in a list. `first` is the first object to replace and `count` is the total number of objects. `objc` and `objv` define a set of new objects to insert into the list. If `objv` is NULL, no new objects will be added and the function acts as a deletion operation.
